Correm.

CLAUDE SKILLS FROM CORREM

# Document to site

How to install the skill in Claude, turn a long document into a branded web page your team can read, search and test themselves on, and publish it.

# Five steps

## 01 Before you start

Skills need **Code execution and file creation** turned on in Claude. On Team and Enterprise plans, an admin may need to switch skills on for your organisation.

## 02 Install the skill

Download the ZIP. In Claude, go to **Customize** > **Skills**, click **+**, then **Create skill**, then **Upload a skill**, and choose the ZIP.

## 03 Run it

Start a new chat. Attach your document, your brand guidelines and your logos, and type: *"Turn this into a website using the Document to site skill."* Claude asks a few questions, then builds the page.

## 04 Publish it

If the document is confidential, host the file behind your staff login, for example on your intranet. If it is not, Netlify Drop works.

## 05 Update it

Run the skill again with the new version of the document, then replace the old file.

Correm is not a law firm and these skills do not provide legal advice. They are provided free and as they are, for general use. Outputs are produced by AI and may contain errors: check everything before you publish or rely on it. Using a skill or its output does not create a relationship between you and Correm. If you need advice on your documents, speak to a solicitor. Correm can put you in touch with one at correm.ai.
